AIR MAIL
SPECIAL DELIVERY

Dr. Herbert Arkin
215 Birch Drive
Roslyn, Long Island
New York

Dear Doctor Arkin:

Enclosed are excerpts from the industry method proposed to the Federal Trade Commission. In particular, we are concerned with the statistics on Page 7 and the conclusion that approximately 205 cigarets should be tested in order to arrive at a reasonably precise value of Total Particulate Matter.

Hopefully by Friday the present confused situation regarding the nature of the testimony which the industry desires to present to the Federal Trade Commission will be cleared up. If the lawyers are interested in having you participate, I will let you know by calling you at your home.

Sincerely yours,

H. Wakeham, Vice President -
Corporate Research and Development
